A Safety Note About Safe-T-Gate

*A guitar case transforms itself into a one-piece
extendible barricade for emergency traffic control work*

Dallas - With music blaring in the background, workers are rushing to get to their next emergency traffic control work situation. Their new work instrument ??? a bright orange guitar case, which magically opens up and transforms itself into an eight-foot long extendible barricade.

Safe-T-Gate is ideal for vehicle and pedestrian traffic control. This new and innovative barricade is made of high-density polyethylene. It's attractive, durable, lightweight, easy to carry, and very easy to store.

Safe-T-Gate is extremely visible due to 52 separate high-grade reflective strips spread over the eight-foot extendible surface of the product. Each of the two bottom legs accepts up to 20 lbs of sand or water for optimal stability. Two convenient sliding clips enable users to mount traffic signs for quick set-up and removal.

As a final safety note, Alexandre Moricz says, "Giving workers the right work instrument is the key to safe, efficient, and effective emergency traffic control work".
